

DEFINITION REAR-PROJECTION FILM

Definition Rear-Projection Film has high contrast properties, wide viewing angle capability, and eliminates hot-spotting. Definition is available in large, seamless sizes - up to 122" diagonally and in a choice of either 4:3 or 16:9 aspect ratios. Tiled installation allows for even larger digital displays. Create an instant rear-projection display by applying Definition Film to any glass or acrylic surface. Built-in adhesives expedite installation.

Definition Film gives you the freedom to display your content in stunning fashion. Definition Rear-Projection Film is being used in retail environments to turn static glass and banners into digital displays that captivate! Add our [Touch Foil](#) technology to Definition Film to transform your storefront window into an interactive experience - engaging your customers even before they enter your store. Keeping content fresh and exciting is as easy as updating a digital signage controller.

Common Applications for Definition Film

- Retail Windows
- Lobbies
